

## Middle School Technical Design On-site Problem

Image retrieved from <http://atmoapparel.co.uk/messenger-bags-hot/>

We live in a society that is constantly on-the-move. While cell phones can provide much of our day-to-day informational needs, there are times when larger, portable electronic devices may be of greater use.

Transporting electronic devices from place to place is the chief concern of your new design firm. In the current business quarter your firm will focus on shoulder bags for larger electronic devices, with consideration given to equipment safety; stylishness, durability, and ergonomics of the bags; and, storage for all things related to larger, portable electronic devices.

Follow the steps of the design process, as well as the regulations noted in the TSA Middle School Competitive Events Guide, to develop a solution for the described problem.
